## SUMMARY

An analytical, detail-driven data professional with 5 years of experience across data engineering, analytics, and business intelligence, with a strong grounding in U.S. healthcare payer data and modern cloud data platforms. Completed an MSc in Data Analytics at Dublin Business School in 2025 and earned the Microsoft Fabric Analytics Engineer Associate certification (DP-600) in 2026, alongside two end-to-end lakehouse portfolio projects. Seeking a Data Engineer, Data Analyst, or Analytics Engineer role to apply a proven track record of building reliable pipelines, resolving data quality issues at their root cause, and turning complex, messy data into insight that stakeholders can genuinely act on.

## SKILLS

- **Programming Languages:** Python, SQL, PySpark, DAX, M Code (Power Query), Shell Scripting (basic)
- **Data Engineering & Cloud:** Azure Data Factory, Azure Databricks (Delta Lake, Unity Catalog, Auto Loader, Databricks Workflows), Azure Data Lake Storage Gen2, Microsoft Fabric (Lakehouse, OneLake, Dataflows Gen2), Snowflake, AWS (S3, Redshift, Elasticsearch), MongoDB, SSIS, Apache Airflow (basic), Terraform/IaC, Docker (basic)
- **Databases:** Oracle PL/SQL, SQL Server, PostgreSQL, MySQL
- **BI & Reporting:** Power BI (DAX, Semantic/Tabular Models, Row-Level Security), Tableau, SSRS, Power Apps, Power Automate, Microsoft Dataverse, Excel (Advanced)
- **Data Governance & Quality:** Data validation and reconciliation, root cause analysis, data quality rules and controls, Databricks Unity Catalog access governance, metadata and documentation standards
- **DevOps & Collaboration:** Git, GitHub, Azure DevOps, Agile/Scrum, JIRA, Confluence
- **Key Skills:** Critical thinking, root cause investigation, stakeholder management, cross-functional collaboration, client-facing consulting, mentoring and technical leadership

## WORK EXPERIENCE

**Data Analyst & Engineering Consultant, Innovaccer Analytics Pvt Ltd** December 2021 – September 2024
Delivered data engineering and analytics solutions within a U.S. healthcare payer environment, working with claims, eligibility, member, and provider data to support cost, quality, and risk adjustment reporting.

- Designed and owned scalable **ETL/ELT** pipelines using **PySpark** and **Spark SQL**, following medallion architecture (Bronze/Silver/Gold) patterns to process claims and clinical data at scale
- Integrated healthcare data for **10+ client accounts** from multiple sources, including Snowflake, ADLS and SFTP, into governed Bronze, Silver and Gold layers
- Governed **Delta Lake** models and modelling standards using **Databricks**, including **Unity Catalog** for access control and governance, and **Auto Loader** for reliable incremental ingestion
- Supported **risk adjustment** analytics, working with HCC/RAF scoring data to inform financial and quality reporting
- Wrote and optimised complex **SQL**, including window functions, CTEs, and stored procedures, to build reliable datasets for downstream reporting
- Built and maintained pipelines on **Azure Data Factory** and **Snowflake**, integrating data from multiple enterprise and third-party sources into a shared, trusted platform
- Migrated data across layers, from **S3** and **Redshift** into **MongoDB**, supporting application-layer access to processed data
- Investigated recurring data quality issues through structured root cause analysis, driving fixes that reduced repeat incidents rather than one-off patches
- Delivered **12+ Power BI dashboards** and semantic models covering cost, quality, risk, and out-of-network performance for client and internal stakeholders
- Automated weekly reporting with scheduled pipelines, saving about **5 hours** of manual work every week
- Built a reusable **dbt** unified data model that set up a new client project environment in **one click**
- Optimised **PySpark** jobs for full loads, cutting processing time by about **30%**
- Partnered with BI teams to publish curated, analytics-ready datasets that fed unified Power BI reporting, supporting consistent decision-making across teams
- Created and maintained data quality frameworks and governance standards, covering validation rules, ownership, and documentation across the platform
- Mentored junior engineers and analysts and ran knowledge transfer sessions on the product, Python, and SQL, contributing to design reviews, code review standards, and documentation practices
- Applied HL7 and FHIR message standards and InterSystems technologies to support healthcare system interoperability, integration testing, and UAT

- Collaborated with business, clinical, and technical stakeholders across workshops and requirements sessions, translating fuzzy business asks into clear, buildable technical specifications

**Senior Data Analyst, ANR Software Pvt Ltd** November 2019 – December 2021

Delivered data analysis and reporting for point-of-sale and payments data, supporting pricing, reconciliation, and commercial decision-making.

- Built **ETL** pipelines orchestrated through **Azure Data Factory**, supporting reliable, scheduled data movement across point-of-sale and payments systems
- Wrote and optimised **SQL** queries to reconcile transactional and pricing data across multiple source systems, reducing reconciliation turnaround time
- Supported pricing analysis, including margin analysis, cost tracking, and pricing model development for commercial stakeholders
- Supported **transaction monitoring** activities, including scenario tuning, threshold calibration, and effectiveness testing to keep monitoring controls accurate and useful
- Built **Power BI** dashboards and reports, applying row-level security to restrict access according to organisational hierarchy
- Applied **Python** for data transformation, automation, and analysis, reducing manual reporting effort across recurring tasks
- Investigated and resolved data quality issues through root cause analysis, working directly with business stakeholders to agree fixes
- Documented data flows, transformation logic, and reporting processes to support handover and ongoing maintenance

## PORTFOLIO PROJECTS

**Azure Databricks Healthcare Lakehouse** | github.com/mohdarqam/azure-databricks-healthcare-lakehouse 2026

- Built a metadata-driven lakehouse on **Azure Data Factory** and **Databricks** with Bronze, Silver and Gold layers on **Delta Lake**, using synthetic healthcare data
- Orchestrated Databricks jobs from ADF pipelines, connecting orchestration and processing in one end-to-end flow

**Retail Lakehouse with dbt and Airflow** | github.com/mohdarqam/Walmart_Airflow_DBT_Project 2026

- Built a medallion lakehouse on **Databricks** and **AWS S3**, orchestrated with **Apache Airflow** and transformed with **dbt**
- Modelled the Gold layer as a One Big Table and then a star schema of fact and dimension tables for analytics

## EDUCATION

Master of Science in Data Analytics 2024–2025
Dublin Business School
Result: 2.1

Bachelor of Technology, Electronics and Communication Engineering 2015–2019
Jamia Hamdard

## CERTIFICATIONS

- Microsoft Certified: Fabric Analytics Engineer Associate (DP-600) – Microsoft Aug 2026
  View Certificate
- EY Technology Risk Job Simulation – Forage April 2026
  View Certificate
- J.P. Morgan Quantitative Research Job Simulation – Forage April 2026
  View Certificate
- Implementing a Data Warehouse SQL Server 2019 – LinkedIn September 2025
  View Certificate
- Structured Query Language (SQL) Advanced Certificate – HackerRank October 2024
  View Certificate
- Power BI Masters – iNeuron.ai June 2020
  View Certificate

## ACHIEVEMENTS

- Spot Award – Innovaccer Analytics, for delivering high-impact platform reliability improvements
- Team Excellence Award – Innovaccer Analytics, for contribution to data engineering standards and mentoring
